SUMMARY

A creative programmer and a heavy Linux user. Started tinkering with computers at age of 13. Since then had a variety of experience in systems programming (C/C++), OS administration(Linux, Windows, Mac), scripting (JavaScript), and web(HTML+CSS,JavaScript,Jquery,Php and Wordpress). For the past 4 years main interest lies in front-end development of web applications, JavaScript, and everything JavaScript related.

I believe in the future of web interfaces to just about everything you can imagine! JavaScript is slowly getting it's grip on all major domains of human online interaction, and I will be there to harness all of the new possibilities. I am continuously looking into new ways to unleash the hidden potential of The Language That Can.

[UPDATE] Lately, I have started to work with angularJs and angular2.
